

Gypsumboard White is used for construction of internal space suspended ceilings, curtain walls and section walls.

Gypsumboard White is composed of gypsum and paper pulp at the core and special surface cardboard, covered to both sides.

Highly pure natural gypsum at core section maintains hardness, resistance, lightness and processability to the plate.

It can be cut easily via utility knife.

All applications, constructed with Gypsumboard White, are light, flexible and solid, and as it is attached to the building bearings via flexible adhesion details, it maintains secure structures against earthquake.

Walls, constructed with using Gypsumboard White, has thinner cross-sections compared to traditionally constructed walls, and saves location. It is easy to use, and maintains rapid construction. It maintains cost effective construction applications.

PRODUCT DETAIL

Thickness: 9,5; 12,5; 15 mm

Lenght: 2500 mm

Width: 1200 mm
